

**Listing and Amendments to the Claims**

This listing of claims will replace the claims that were published in the PCT Application:

1. (original) Method for adding information to a timer for a video recording device, wherein said timer specifies details necessary to record a video program, comprising
  - recording a video program due to a recurring timer;
  - extracting additional information from the video signal, the additional information being received simultaneously with the video program;
  - detecting if said additional information contains a specified information regarding said video program;
  - extracting said specified information from said additional information;
  - associating said specified information with current or future instances of the recurring timer; and
  - displaying a list of timers with said associated information.
2. (original) Method according to claim 1, wherein said specified information is the program title of the video program being recorded.
3. (original) Method according to claim 1, wherein the specified information is only inserted to those instances of said recurring timer that do not have said specified information already inserted.
4. (original) Method according to claim 1, wherein the specified information is inserted to all instances of said recurring timer.
5. (original) Method according to claim 1, wherein said additional information is extracted from a vertical blanking interval of an analogue video signal.

6. (original) Method according to claim 5, wherein said specified information is extracted from line 21 of the vertical blanking interval of an NTSC signal.
7. (original) Apparatus for setting up a timer in a video recording device, the apparatus comprising
  - means for recording a video program due to a recurring timer;
  - means for extracting additional information from the video signal, said additional information being received simultaneously with the video program;
  - means for detecting if said additional information contains a specified information regarding said video program, the specified information being displayable in a list of timers;
  - means for extracting said specified information from said additional information; and
  - means for inserting said specified information to current or future instances of the recurring timer.
8. (original) Apparatus according to claim 7, wherein said additional information is extracted from a vertical blanking interval of an analogue video signal.
9. (original) Apparatus according to claim 7, wherein said specified information is extracted from line 21 of the vertical blanking interval of an NTSC signal.
